## THE PORTABLE BIG SCREEN DVX-Pod

One of our biggest beefs with portable media players is their small screens. With the arrival of the DVX-Pod, you can cross that one off the list. The iPod-white device is the first PMP to feature a 6.5-inch screen, complete with a 170-degree viewing angle and top-notch 720 x 480-pixel resolution, putting most portable DVD players to shame. The trade-off is that the DVX-Pod weighs almost a pound and a half and is entirely too large for a pocket. But consider everything this gadget does, including direct TV recording, as well as the ability to handle several music (MP3, WMA) and picture (JPEG, BMP, GIF) formats. A one-click scroll wheel on the right side handles both navigation and volume control. If you need an even bigger screen, you can always use the DVX-Pod's AV-out feature with your television.
